Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial	galactostopicultillians of the galactorions of the galactorions.  -!- SUBCELLULIAN LOCATION: Secreted!- BLOTECHNOLOGY: The effect of PG can be neutralized by introducing an antisense PG gene by genetic manipulation. The Plavr Savr tomato produced by Calgene (Monsanto) in such a manner has a longer shelf life due to delayed ripening!- SIMILARITY: Belongs to family 28 of glycosyl hydrolases.	[4]  REVISIONS.  Hiatt W.R.;  Submitted (OCT-1987) to the EMBL/GenBank/DDBJ databases.  Submitted (OCT-1987) to the EMBL/GenBank/DDBJ databases.  -I- FUNCTION: Acts in concert with the pectinesterase, in the ripening process. Is involved in cell wall metabolism, specifically in polyuronide degradation.  -I- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-  -I- GATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-  -I- GATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-  -I- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-	[3] SEQUENCE FROM N.A. Plant Physiol. 103:669-670(1993).
-!- FUNCTION: Acts in concert with the pectinesterase, in the ripolycenses. Is involved in cell wall metabolism, specifically in polyuronide degradation.
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectate and other galacturonans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRAIN=cv. Plant Physiol. 103:289-290(1993).
-!- FUNCTION: Acts in concert with the pectinesterase,
process. Is involved in cell wall metabolism, speci
polyuronide degradation.
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                              Atkinson R.G.;
"A cDNA clone for endopolygalacturonase from apple.";
Plant Physiol. 105:1437-1438(1994).
-!- FUNCTION: Acts in concert with the pectinesterase,
process. Is involved in cell wall metabolism, specipolyuronide degradation.
-!- CAFALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha.
galactosiduronic linkages in pectate and other gala-
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MALDO

1. FUNCTION: Acts in concert with the pectinesterase, in the ripprocess. Is involved in cell wall metabolism, specifically in polyuronide degradation.

2. CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectate and other galacturonans.

3. UNICARITY: Belongs to family 28 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIGNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PROSITE; PS00502; POLYGALACTURONASE; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      galactosiduronic linkages in pectate and other galacturonic TISSUE SPECIFICITY: Pollen.
-:- TISSUE SPECIFICITY: Pollen.
-:- DEVELOPMENTAL STAGES, Appears 12 days before anthesis and levels are seen in pollen on the day of anthesis.
-:- SIMILARITY: Belongs to family 28 of glycosyl hydrolases.

CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-
CATALYTIC accordances in pectate and other galact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of Mol. Biol. 26:1989-1993(1994).
FUNCTION: May function in the depolymeria its walls during pollen tube elongation,
